Mapping Air Quality

Tech datasheet

Accurate air pollution mapping on a previously unimaginable scale

This novel smart-city technology provides a highly efficient and large-scale pollution mapping tool.

Our sensing cartridge design allows to easily replace all sensors when required and **it does not require in-situ calibration.**

CUSTOM VISUALISATION TOOLS

Pollution data is provided using the latest GIS visualisation tools, and can be adapted to the individual requirements of each customer.

THE NETWORK

The platform is built around a grid of nodes that are strategically placed to optimise map coverage. Our solution is scalable and can be adapted to any scenario.

ADVANCED DATA POST-PROCESSING

Pollution data is run through a unique post-processing algorithm. The algorithms provide precise measurements of several air quality indicators with similar accuracy as traditional equipment but at a fraction of the price. Impressive Pearson Correlation ($R^2 > 0.9$) when compared with traditional AQM equipment.

The platform is fed by innovative sensors which are easy to install and can withstand tough climates.

OUR NODES

- IP65 rated dust tight and water resistant
- Customised low-power electronics
- Low-power wireless network access

WHAT OUR NODES MEASURE

- Temperature
- Relative Humidity
- Ambient Noise
- PM_1 $PM_{2.5}$ PM_{10}
- NO_2 NO SO_2 CO O_3 H_2S CO_2 VOC NH_3
- Atmospheric Pressure

ENVIRONMENTAL REQUIREMENTS

°C

Operating Temperature Range
-40 to 85 °C
-40 to 185 °F

Operating Relative Humidity
Up to 95%
non-condensing

bettair®
Mapping Air Quality

Tech datasheet

Winner at the Airlab Challenge 2023

AIRLAB
WINNER
Most accurate multi-pollutant sensor
Outdoor - Overall
2023

Partenaires du challenge/Challenge's partners

Meets US EPA air sensor performance targets

Accredited Class 1 CEN/TS 17660-1:2021

MCERTS Certification (*) UK Environment Agency

(*) In progress. Expected June-24
